FOREWORD.....	III
PREFACE.....	VII
FIGURES.....	XVIII
CHAPTER I THE PROPERTIES OF OCEAN WAVES	
SEA AND SWELL	
Preliminary definition of sea and swell.....	1
Properties of sea.....	1
Properties of swell.....	4
Waves recorded at a point.....	4
Sea wave records.....	4
Swell wave records.....	6
A basic difference between sea and swell.....	6
WAVE AMPLITUDES AND HEIGHTS	
Forecast depends on one number.....	6
Illustrative analogy.....	7
Wave amplitude data.....	7
Exceptionally high amplitudes.....	7
“Heights” and “amplitudes”.....	7
Exceptionally high waves.....	9
Limitations on table 1.6.....	14
Significant wave height.....	14
Significant wave heights as reported by ships.....	15
A height forecast: example 1.1.....	16
Comments on height forecasting—example 1.2 and example 1.3.....	16
WAVE PERIODS AND WAVE LENGTHS	
“Period” vs. <i>Period</i> .....	17
Measurement of “periods”.....	19
Definition of terms.....	20
<i>Wave length</i> vs. “wave length”.....	21
Symbols to be used.....	21
Definition of frequency.....	21
Some new formulas.....	21
WHY A SEA IS DIFFERENT FROM A SWELL.....	22
THE STRUCTURE OF THE WAVES.....	23
A SUMMARY OF THE PROPERTIES OF SEA.....	25
A SUMMARY OF THE PROPERTIES OF SWELL.....	26
THE IN-BETWEEN STATE.....	27
FORECASTING.....	27
CHAPTER II THE GENERATION AND FORECASTING OF SEA WAVES	
INTRODUCTION	
Deep-water waves.....	29
Wave conditions limited by the fetch or by the duration.....	30
Intermediate conditions.....	30

CHAPTER II—Continued

	Page
THE GROWTH OF WAVES	
Initial wavelets.....	31
Short choppy waves.....	31
Energy balance.....	31
The fully developed state.....	31
THE SPECTRUM OF WIND-GENERATED OCEAN WAVES.....	32
The properties of the spectrum.....	32
The important spectral components for a given wind velocity.....	35
CO-CUMULATIVE SPECTRA (C. C. S.).....	37
Derivation.....	37
The properties of the co-cumulative power spectra.....	38
Reason for the co-cumulative spectra.....	40
DESCRIPTION OF THE WIND-GENERATED SEA IN THE FULLY DEVELOPED STATE	41
Definition of the fully developed state.....	41
<i>E</i> values and potential energy for a fully arisen sea.....	45
Wave heights in a fully arisen sea.....	45
The range of "periods" in a fully arisen sea.....	46
"Periods".....	47
Empirical distribution function of the "periods".....	48
Average "period" and average "wave length" in a fully arisen sea.....	50
FORECAST EXAMPLE FOR A FULLY ARISEN SEA AT A GIVEN WIND SPEED.....	50
THE NONFULLY DEVELOPED STATE OF THE SEA.....	52
Case A: Wave characteristics limited by the wind duration.....	52
Case B: Wave characteristics limited by the length of the fetch.....	53
The reason for the fetch and duration lines.....	53
Average "period" and average "wave length" for the nonfully arisen sea.....	53
A correction to be used inside the generating area.....	54
More complicated cases in which both fetch and duration are limited.....	55
Some examples on the use of the fetch and duration graphs.....	55
Waves limited by the fetch.....	59
DISTORTED C. C. S. CURVES.....	65
Advantages and disadvantages of the C. C. S. curves.....	65
The distorted C. C. S. curves.....	66
Disadvantages of the distorted C. C. S. curves.....	67
CHAPTER III WAVE PROPAGATION AND FORECASTING	
SWELL WAVES—SIMPLE MODELS	
INTRODUCTION.....	73
A very simple forecast.....	73
Group velocity.....	75
Interpretation of results.....	76
The results of the simple forecast.....	76
A forecast for a sum of sine waves.....	77
A FORECAST FOR A VERY LARGE SUM OF VERY LOW SINE WAVES.....	80
Dispersion.....	80
Angular spreading.....	85
A WAVE-FORECASTING FILTER (Filter I).....	87
OTHER FILTERS.....	89
A storm with a fetch (Filter II).....	89

CHAPTER III—Continued	
OTHER FILTERS—Continued	Page
A storm moving to leeward (Filter III).....	90
The decrease of waves in the fetch (Filter IV).....	91
THE USE OF THE FILTERS TO FORECAST THE WAVES AT THE POINT OF OBSERVATION.....	92
Statement of the properties of a filter.....	92
Effect of frequencies.....	93
The effect of direction.....	94
Combined effect.....	95
WAVES FROM SEVERAL STORMS.....	96
ADDITIONAL FORECASTING CONSIDERATIONS.....	99
FORECASTING DIAGRAMS FOR DISPERSION AND ANGULAR SPREADING.....	99
Summary of filters.....	99
Forecasting diagrams.....	101
Dispersion diagrams: figures 3.14, 3.15, and 3.16.....	101
Angular spreading factor: figure 3.17.....	105
After the wind ceases.....	109
Range of $E$ .....	109
SOME SAMPLE FORECASTS.....	109
Diagrams needed.....	109
Equipment needed to make a wave forecast.....	110
Steps in a wave forecast.....	110
Steps in preparing a wave forecast.....	111
Analysis of forecast for point A (Example 3.7).....	112
Final forecast for point A (Example 3.7).....	114
Comments.....	116
Forecast for point B (Example 3.7).....	116
Analysis of forecast for point B (Example 3.7).....	116
Final forecast for point B (Example 3.7).....	117
Comments.....	119
Forecast for point C (Example 3.7).....	119
Analysis of forecast for point C (Example 3.7).....	120
Final forecast data for point C (Example 3.7).....	121
A summary of the forecast results.....	121
A SLIGHTLY MORE COMPLICATED CASE (EXAMPLE 3.8).....	124
Analysis of forecast for example 3.8.....	124
Final forecast for example 3.8.....	126
Comments.....	126
THE USE OF THE DISTORTED C. C. S. CURVES.....	127
MOVING FETCHES.....	127
Limitations on filters.....	127
Forecasts for moving fetches.....	127
Filter M-V.....	128
Example 3.9 (Filter M-V).....	129
Filter M-VI.....	130
Example 3.10.....	132
Filter M-VII.....	132
Example 3.11.....	132
HOW SEA CHANGES INTO SWELL.....	135
THE "PERIOD" INCREASE OF OCEAN SWELL.....	135

	<b>Page</b>
CHAPTER III—Continued	
EFFECTS OF VISCOSITY.....	136
Added possible effect of viscosity.....	136
Question not settled.....	136
Cross and head winds.....	136
Forecasts finally merge into local "sea".....	137
CHAPTER IV WAVE OBSERVATION TECHNIQUES	
INTRODUCTION.....	139
Purpose of chapter.....	139
Theory of correct observation methods.....	139
Two purposes for wave observations.....	141
GENERAL OBSERVATIONS.....	141
THE OBSERVATION OF THE "PERIODS".....	142
Difference between the frequency distribution and the spectrum.....	143
Difference between a sea and a swell.....	143
Method of observation.....	143
THE OBSERVATION OF WAVE HEIGHTS.....	144
Procedure A.....	145
Procedure B.....	145
Procedure C.....	146
Examples of the use of procedure C.....	147
Additional facts about procedure C.....	150
Relative importance of procedures A, B, and C.....	151
Reliability of wave height observations.....	151
Methods of height observation (heavy seas).....	153
Methods of height observation (reference line).....	153
Methods of height observation (visual).....	154
PROCEDURES FOR MEASURING THE "WAVE LENGTHS".....	154
General comments.....	154
Definition of "wave length".....	155
The chip log method.....	156
The use of the ship as a scale factor.....	158
Visual estimation of the "wave length".....	160
THE MEASUREMENT OF WAVE "SPEEDS".....	160
CHECK LIST OF VISUAL WAVE PROPERTIES.....	161
CONCLUSION.....	162
CHAPTER V SYNOPTIC FORECASTING METHODS AND WEATHER MAP ANALYSIS	
INTRODUCTION.....	163
WIND FIELD, ACTUAL AND REQUIRED.....	163
Limitations of the weather data.....	164
Simplifying the problem of determining the wind field.....	165
WAYS TO LOCATE THE FETCH.....	165
Some typical fetches.....	165
Moving fetches.....	167
ACCURATE DETERMINATION OF THE WIND VELOCITY.....	168
Three ways to determine the velocity.....	168
Reported winds.....	168
Corrected geostrophic winds.....	168
Correction for curvature.....	169
Correction for air mass stability.....	169
Advantages and disadvantages.....	169
Combined reported winds and corrected geostrophic winds.....	170

CHAPTER V—Continued

ACCURATE DETERMINATION OF THE WIND VELOCITY—		Page
Continued		
Advantages and disadvantages.....		170
THE ACCURATE DETERMINATION OF DURATION.....		170
Aids to interpolation.....		170
Waves already present.....		171
Variable wind velocities.....		171
Slowly varying winds.....		172
A rapid increase in wind velocity.....		172
Decreasing winds.....		173
Viscosity effects.....		174
A SUMMARY CHART HELPS DETERMINE THE WIND FIELD.....		175
The total effect of the fetch, velocity, and duration.....		175
“SEA” AND “SWELL” FORECASTS.....		175
SYNOPTIC WAVE CHARTS.....		176
Forecasting waves by synoptic methods.....		176
Construction and analysis of the chart.....		176
Forecasts from the synoptic wave charts.....		177
Some additional suggestions.....		177
REVISING THE FORECAST.....		178
WAVE FORECASTING CHECK LIST.....		180
CHAPTER VI WAVE REFRACTION.....		
INTRODUCTION.....		181
THE REFRACTION OF ONE SINE WAVE.....		182
Description of refraction.....		182
Snell's Law.....		183
Wave rays.....		183
The change undergone by a refracted sine wave.....		183
Effect of complex contours.....		184
THE REFRACTION OF TWO SINE WAVES.....		184
Apparent lengthening of wave crests.....		184
Echelon waves.....		186
THE REFRACTION OF ACTUAL OCEAN WAVES.....		186
Some misleading effects.....		186
Aerial photographs.....		189
Aerial photograph of Ocracoke (fig. 6.4).....		189
Aerial photograph of Swash Inlet (fig. 6.5).....		190
Enlargement over Ocracoke (fig. 6.6).....		192
Enlargement over Ocracoke (fig. 6.7).....		192
Inland continuation of Swash Inlet (fig. 6.8).....		195
COMPUTATION OF REFRACTION EFFECTS.....		195
Introductory remarks.....		195
Steps to be followed.....		197
THE CONSTRUCTION OF REFRACTION DIAGRAMS FOR A SIMPLE SINE WAVE.....		198
Introductory remarks.....		198
Depth chart.....		198
The construction of a wave ray.....		199
Constructing wave rays by graphical methods.....		202
A useful ray plotter.....		203
The construction of a family of wave rays.....		203

	Page
CHAPTER VI—Continued	
THE DETERMINATION OF $[K(f,\theta)]^2$ and $\Theta(f,\theta)$ .....	205
The effect of refraction on a simple sine wave .....	205
The determination of the direction function .....	210
Crossed wave rays .....	210
General discussion of the refraction and direction functions .....	211
THE REFRACTION OF A PARTICULAR SPECTRUM .....	212
Alignment problems .....	214
AN EXAMPLE OF THE REFRACTION OF A WAVE SPECTRUM	
A hypothetical example .....	214
The hypothetical refraction function .....	215
The spectrum of the waves in deep water .....	215
The decomposition of the spectrum .....	216
Decomposition into directions .....	216
Decomposition into frequencies .....	216
The total decomposition .....	218
The refraction of the sine waves in the sum .....	219
The computations of $\Delta E_h$ .....	219
Comments on the example .....	219
BOTTOM FRICTION AND PERCOLATION .....	220
FINAL COMMENTS ON REFRACTION THEORY .....	221
CHAPTER VII OPERATIONAL APPLICATIONS OF FORECAST- ING METHODS	
INTRODUCTION .....	223
SHIP MOTIONS .....	225
Kinds of ship motions .....	225
A ship in a simple sine wave .....	226
The "periods" of a ship's motion .....	226
The amplitudes of ship motions .....	227
FACTORS AFFECTING THE SPEED OF SHIPS .....	229
Effect of ship motions on speed .....	232
Rolling .....	232
Pitch and heave .....	233
Pitch and heave in an irregular sea .....	237
GENERAL OPERATIONAL PROBLEMS .....	237
Refueling at sea .....	237
Aircraft carrier behavior in sea and swell .....	239
Hurricanes .....	240
Ship damage .....	240
Forecasting ship motions, ship speed, and operational factors .....	243
LANDING AND TAKEOFF CONDITIONS FOR SEAPLANES .....	243
General information .....	243
A study of the PBM .....	245
Landing a seaplane on a simple sinusoidal wave .....	246
Landing in a swell .....	249
An analysis of the results of landings at different headings .....	251
Takeoff in a swell .....	252
Landing in a sea .....	254
Takeoff in a sea .....	254
More complex conditions .....	255
Suggested pilot techniques for determining sea and swell conditions .....	256
Comments on suggested pilot techniques .....	257
Reverse propellers .....	257

CHAPTER VII—Continued

LANDING AND TAKEOFF CONDITIONS FOR SEAPLANES—

Continued

	Page
Jet assisted takeoff (Jato) .....	257
Summary .....	258
NEW SEAPLANE DESIGNS .....	258
CONCLUSION .....	258
CHAPTER VIII VERIFICATION BY FORECASTS AND OBSER-	
VATIONS	
INTRODUCTION .....	259
FORECASTING WAVES IN A GENERATING AREA .....	260
Example 8.1 .....	260
Step 1. Locate fetch .....	260
Step 2. Determine wind velocity .....	260
Step 3. Determine wind duration .....	260
Step 4. Use C. C. S. graphs .....	262
Step 5. Verify forecasts .....	262
FORECASTING WAVES IN A GENERATING AREA AFTER	
THE WINDS STOP .....	263
Example 8.2 .....	263
Step 1. Determine the fetch .....	263
Step 2. Determine wind velocity and duration .....	263
Step 3. Compute variation of $E$ over the fetch .....	265
Step 4. Compute frequency band .....	265
Step 5. Compute travel time of each frequency .....	265
Step 6. Verify forecast .....	265
Example 8.3. Short fetch with offshore winds .....	266
THE PROPAGATION OF WAVES OUTSIDE OF THE FETCH ..	267
Example 8.4 .....	267
Step 1. Measure fetch and decay dimensions .....	268
Step 2. Determine wind velocity and duration .....	268
Step 3. Compute $\theta_3$ , $\theta_4$ , and the angular spreading factor .....	269
Step 4. Determine travel time of smallest frequency .....	269
Step 5. Compute $f_2$ and $f_6$ .....	269
Step 6. Compute $E$ values .....	270
Step 7. Verify .....	270
FILTER II FORECASTS .....	270
A TEST OF THE FORECASTING METHODS .....	270
Procedure followed .....	270
Results of forecasts .....	271
The reason for the misses .....	273
Summary .....	273
“PERIOD” RANGE AND AVERAGE “PERIOD” VERIFICATION	274
Verification in above forecasts .....	274
Theoretical versus observed values .....	274
Data on fully developed seas .....	275
CONCLUSIONS .....	279
BIBLIOGRAPHY .....	281
FIGURE AND PHOTOGRAPH CREDITS .....	285

# Figures

	Page
FRONTISPIECE Carrier Division 27 successfully weathering China Sea typhoon (Ships shown are U. S. S. <i>Block Island</i> (CVE-106) and U. S. S. <i>Gilbert Island</i> (CVE-107))
