

Notes and Errata for the first printing of Modern Marine Weather

All of these issues will be addressed in the 2nd printing.

See starpath.com/wx for extensive notes and news on this book.

1. Front Cover: The affiliation of meteorologist Lee Chesneau on the front cover quote is outdated. This should be “former” NWS forecaster. Lee’s ongoing work is presented at marineweatherbylee.com.
2. There is a new version of ZyGrib called XyGrib. See it at opengribs.org.
3. File names for the 72-hr forecasts are PPAK98 (for the Atlantic), and PPBK98 (for the Pacific).
4. Available forecasts of both GFS and HRRR models have recently been increased. See starpath.com/wx for details.
5. Page 197. Saildocs offerings of *individual* coastal zone forecasts are available for some but not all zones.
6. OPC has discontinued tracking Highs on surface analysis maps, and the 2nd printing makes this adjustment in both text and map images used.
